Huma-Num IR* is a “star” research infrastructure of the Ministry of Higher Education, Research and Innovation, implemented by the CNRS alongside Campus Condorcet and Aix-Marseille University. With the NAKALA data repository, it is one of the reference centers of the national “Recherche Data Gouv” ecosystem for open science. Committed to the construction of the European Open Science Cloud (EOSC), it leads France’s participation in the European Research Infrastructure Consortium (ERIC) DARIAH.
Huma-Num IR* provides a set of services and digital tools for research projects at all stages of the data life cycle: secure storage, hosting, calculation, processing, collaborative work, academic writing... and helps to guide our users in the improvement of their data quality.

These services and tools are built upon an infrastructure-based technologies and secured information systems.

Our NAKALA data repository and the ISIDORE search assistant ensure the sustainability, dissemination and description of research data and productions according to academic practices in the humanities and social sciences.

These services and tools are linked to a collective consultation process led by national and international research communities within the HN Consortiums, the HN Lab, an innovation and research center, and various partners, including the “Maisons des Sciences de l’Homme”, which are regional research infrastructures.
